Geophysical Studies in the Caucasus (Lecture Notes in Earth System Sciences) Lev V. Eppelbaum, Boris Khesin

The subject of this book is the methodology and results of integrated geophysical investigations in the Caucasian region, mainly interpretation of magnetic and gravity anomalies with utilization of a huge petrophysical database for the evaluation of geological structure and mineral resources. Relative voluminous geophysical data are useful for the Earth Sciences researchers interested in the Caucasian region (and adjacent and similar regions) characterized by complicated geological structure, inclined magnetization (polarization), uneven topography and mountain/sea transition. Examination of geophysical fields verified by super-deep wells drilling indicates that magmatic rocks of the Lesser Caucasus are extended northward under thick sedimentary cover of the Kura Depression up to the Greater Caucasus. These rocks form hidden petroleum-bearing traps of a newly identified type. On the basis of geophysical studies (mainly inexpensive magnetic and electric methods), a new copper-polymetallic province in the Greater Caucasus has been revealed. A newly developed integrated approach and special information-statistical techniques for processing and interpretation of geophysical data facilitate detection of important geological features, e.g. hidden intersections of linear structures that control location of large commercial ore and oil-and-gas deposits, as well as focuses of dangerous geodynamic events at a depth. Numerous illustrations (including colour) elucidate different problems and solutions on various scales and in diverse geological-geophysical environments. Many aspects of this book have been presented at the teaching courses for bachelors, masters and doctors at the Tel-Aviv University (Tel Aviv, Israel) and Ben-Gurion University (Be'er-Sheva, Israel). Benefits to readers are predetermined by the combination of the authors many-years personal experience in the geophysical studies of Azerbaijan and other regions of the Caucasus with the authors' knowledge of the modern level of geophysics in the world.

From reader reviews:

John Folsom:

Have you spare time for any day? What do you do when you have more or little spare time? Yes, you can choose the suitable activity regarding spend your time. Any person spent their spare time to take a walk, shopping, or went to the actual Mall. How about open or maybe read a book called Geophysical Studies in the Caucasus (Lecture Notes in Earth System Sciences)? Maybe it is for being best activity for you. You understand beside you can spend your time along with your favorite's book, you can cleverer than before. Do you agree with their opinion or you have various other opinion?

Ruth Barr:

Nowadays reading books be a little more than want or need but also become a life style. This reading addiction give you lot of advantages. Advantages you got of course the knowledge even the information inside the book that improve your knowledge and information. The data you get based on what kind of book you read, if you want have more knowledge just go with education books but if you want truly feel happy read one along with theme for entertaining like comic or novel. Often the Geophysical Studies in the Caucasus (Lecture Notes in Earth System Sciences) is kind of book which is giving the reader unforeseen experience.

Mark Bunnell:

In this era which is the greater individual or who has ability in doing something more are more valuable than other. Do you want to become one among it? It is just simple approach to have that. What you must do is just spending your time not much but quite enough to have a look at some books. One of the books in the top listing in your reading list is actually Geophysical Studies in the Caucasus (Lecture Notes in Earth System Sciences). This book and that is qualified as The Hungry Inclines can get you closer in getting precious person. By looking right up and review this book you can get many advantages.

Wm Dunlap:

As we know that book is significant thing to add our knowledge for everything. By a guide we can know everything you want. A book is a list of written, printed, illustrated or maybe blank sheet. Every year had been exactly added. This publication Geophysical Studies in the Caucasus (Lecture Notes in Earth System Sciences) was filled with regards to science. Spend your free time to add your knowledge about your research competence. Some people has several feel when they reading any book. If you know how big benefit from a book, you can sense enjoy to read a reserve. In the modern era like now, many ways to get book that you simply wanted.
