Scheduling for Parallel Processing (Computer Communications and Networks)

Maciej Drozdowski

Scheduling for Parallel Processing (Computer Communications and Networks) Maciej Drozdowski

Overview and Goals This book is dedicated to scheduling for parallel processing. Presenting a research field as broad as this one poses considerable difficulties. Scheduling for parallel computing is an interdisciplinary subject joining many fields of science and technology. Thus, to understand the scheduling problems and the methods of solving them it is necessary to know the limitations in related areas. Another difficulty is that the subject of scheduling parallel computations is immense. Even simple search in bibliographical databases reveals thousands of publications on this topic. The diversity in understanding scheduling problems is so great that it seems impossible to juxtapose them in one scheduling taxonomy. Therefore, most of the papers on scheduling for parallel processing refer to one scheduling problem resulting from one way of perceiving the reality. Only a few publications attempt to arrange this field of knowledge systematically. In this book we will follow two guidelines. One guideline is a distinction between scheduling models which comprise a set of scheduling problems solved by dedicated algorithms. Thus, the aim of this book is to present scheduling models for parallel processing, problems defined on the grounds of certain scheduling models, and algorithms solving the scheduling problems. Most of the scheduling problems are combinatorial in nature. Therefore, the second guideline is the methodology of computational complexity theory. In this book we present four examples of scheduling models. We will go deep into the models, problems, and algorithms so that after acquiring some understanding of them we will attempt to draw conclusions on their mutual relationships.

From reader reviews:

Jeannine Ricks:

Why don't make it to be your habit? Right now, try to ready your time to do the important behave, like looking for your favorite e-book and reading a book. Beside you can solve your long lasting problem; you can add your knowledge by the e-book entitled Scheduling for Parallel Processing (Computer Communications and Networks). Try to make the book Scheduling for Parallel Processing (Computer Communications and Networks) as your friend. It means that it can to become your friend when you experience alone and beside those of course make you smarter than ever. Yeah, it is very fortunated for you. The book makes you more confidence because you can know almost everything by the book. So , let's make new experience along with knowledge with this book.

Elsie Fiala:

Typically the book Scheduling for Parallel Processing (Computer Communications and Networks) has a lot of information on it. So when you read this book you can get a lot of help. The book was written by the very famous author. Tom makes some research ahead of write this book. This kind of book very easy to read you can obtain the point easily after looking over this book.

Daniel Pitts:

Reading can called thoughts hangout, why? Because while you are reading a book specifically book entitled Scheduling for Parallel Processing (Computer Communications and Networks) your thoughts will drift away trough every dimension, wandering in each aspect that maybe unknown for but surely can be your mind friends. Imaging each word written in a e-book then become one form conclusion and explanation that maybe you never get previous to. The Scheduling for Parallel Processing (Computer Communications and Networks) giving you one more experience more than blown away your brain but also giving you useful info for your better life within this era. So now let us explain to you the relaxing pattern is your body and mind are going to be pleased when you are finished looking at it, like winning a. Do you want to try this extraordinary paying spare time activity?

Lisa Keener:

That book can make you to feel relax. This specific book Scheduling for Parallel Processing (Computer Communications and Networks) was colorful and of course has pictures on there. As we know that book Scheduling for Parallel Processing (Computer Communications and Networks) has many kinds or type. Start from kids until youngsters. For example Naruto or Investigation company Conan you can read and believe you are the character on there. So , not at all of book are usually make you bored, any it makes you feel happy, fun and relax. Try to choose the best book to suit your needs and try to like reading this.
