The book provides an introduction to all the clinical topics required by the trainee psychiatrist, including all the sub-specialties and major psychiatric conditions. Discussion of treatment includes not only scientific evidence, but also practical problems in the management of patients their family and social context. The text emphasizes an evidence-based approach to practice and gives full attention to ethical and legal issues. Introductory chapters focus on recognition of signs and symptoms, classification and diagnosis, psychiatric assessment, and aetiology. Further chapters deal with all the the major psychiatric syndromes as well as providing detailed coverage of pharmacological and psychological treatments. The book gives equal prominence to ICD and DSM classification - often with direct comparisons - giving the book a universal appeal.
