Time Warps, String Edits, and Macromolecules: The Theory and Practice of Sequence Comparison

David Sankoff, Joseph Kruskal

Time Warps, String Edits and Macromolecules is a young classic in computational science. The computational perspective is that of sequence processing, in particular the problem of recognizing related sequences. The book is the first, and still best compilation of papers explaining how to measure distance between sequences, and how to compute that measure effectively. This is called string distance, Levenshtein distance, or edit distance. The book contains lucid explanations of the basic techniques; well-annotated examples of applications; mathematical analysis of its computational (algorithmic) complexity; and extensive discussion of the variants needed for weighted measures, timed sequences (songs), applications to continuous data, comparison of multiple sequences and extensions to tree-structures. This theory finds applications in molecular biology, speech recognition, analysis of bird song and error correcting in computer software.

From reader reviews:

Jonathan Head:

Often the book Time Warps, String Edits, and Macromolecules: The Theory and Practice of Sequence Comparison will bring that you the new experience of reading a new book. The author style to explain the idea is very unique. When you try to find new book to read, this book very suitable to you. The book Time Warps, String Edits, and Macromolecules: The Theory and Practice of Sequence Comparison is much recommended to you you just read. You can also get the e-book from the official web site, so you can quickly to read the book.

Annette Spafford:

Spent a free the perfect time to be fun activity to perform! A lot of people spent their free time with their family, or their friends. Usually they carrying out activity like watching television, likely to beach, or picnic inside park. They actually doing same task every week. Do you feel it? Would you like to something different to fill your own free time/ holiday? Might be reading a book is usually option to fill your totally free time/ holiday. The first thing that you'll ask may be what kinds of book that you should read. If you want to attempt look for book, may be the reserve untitled Time Warps, String Edits, and Macromolecules: The Theory and Practice of Sequence Comparison can be excellent book to read. May be it might be best activity to you.

Edward Sullivan:

Do you have something that that suits you such as book? The reserve lovers usually prefer to pick book like comic, short story and the biggest one is novel. Now, why not trying Time Warps, String Edits, and Macromolecules: The Theory and Practice of Sequence Comparison that give your satisfaction preference will be satisfied by simply reading this book. Reading behavior all over the world can be said as the opportunity for people to know world far better then how they react to the world. It can't be said constantly that reading habit only for the geeky person but for all of you who wants to be success person. So , for every you who want to start reading as your good habit, you may pick Time Warps, String Edits, and Macromolecules: The Theory and Practice of Sequence Comparison become your personal starter.

Nicole Powell:

Guide is one of source of information. We can add our information from it. Not only for students but in addition native or citizen have to have book to know the upgrade information of year to be able to year. As we know those guides have many advantages. Beside many of us add our knowledge, also can bring us to around the world. With the book Time Warps, String Edits, and Macromolecules: The Theory and Practice of Sequence Comparison we can get more advantage. Don't someone to be creative people? To be creative person must love to read a book. Simply choose the best book that ideal with your aim. Don't end up being doubt to change your life by this book Time Warps, String Edits, and Macromolecules: The Theory and

Practice of Sequence Comparison. You can more appealing than now.
