## Space Elevators: An Advanced Earth-Space Infrastructure for the New Millennium NASA

What is a space elevator? A space elevator is a physical connection from the surface of the Earth to a geostationary Earth orbit (GEO) above the Earth .35,786 km in altitude. Its center of mass is at the geostationary point such that it has a 24-hr orbit and stays over the same point above the equator as the Earth rotates on its axis. The vision is that a space elevator would be utilized as a transportation and utility system for moving people, payloads, power, and gases between the surface of the Earth and space. It makes the physical connection from Earth to space in the same way a bridge connects two cities across a body of water. The Earth to GEO space elevator is not feasible today, but could be an important concept for the future development of space in the latter part of the 21st century. It has the potential to provide mass transportation to space in the same way highways, railroads, power lines, and pipelines provide mass transportation across the Earth's surface. The low energy requirements for moving payloads up and down the elevator could make it possible to achieve cost to orbit <\$10/kg. The potential for low-cost mass transportation to space makes consideration of the technology paths required for space elevator construction very important today. The technology paths are beneficial to many other developments and can yield incremental benefits as progress is made toward making space elevator construction feasible.

### **From reader reviews:**

#### **Michael Walsh:**

What do you in relation to book? It is not important along? Or just adding material when you require something to explain what your own problem? How about your extra time? Or are you busy person? If you don't have spare time to accomplish others business, it is gives you the sense of being bored faster. And you have time? What did you do? Everyone has many questions above. They should answer that question simply because just their can do this. It said that about e-book. Book is familiar on every person. Yes, it is suitable. Because start from on pre-school until university need this particular Space Elevators: An Advanced Earth-Space Infrastructure for the New Millennium to read.

#### **Matthew Gregg:**

Now a day people who Living in the era everywhere everything reachable by interact with the internet and the resources within it can be true or not demand people to be aware of each data they get. How people have to be smart in obtaining any information nowadays? Of course the reply is reading a book. Reading a book can help individuals out of this uncertainty Information especially this Space Elevators: An Advanced Earth-Space Infrastructure for the New Millennium book since this book offers you rich details and knowledge. Of course the details in this book hundred % guarantees there is no doubt in it you probably know this.

#### **Louis Hudson:**

The ability that you get from Space Elevators: An Advanced Earth-Space Infrastructure for the New Millennium could be the more deep you digging the information that hide into the words the more you get thinking about reading it. It does not mean that this book is hard to comprehend but Space Elevators: An Advanced Earth-Space Infrastructure for the New Millennium giving you thrill feeling of reading. The copy writer conveys their point in particular way that can be understood by anyone who read the item because the author of this reserve is well-known enough. This specific book also makes your personal vocabulary increase well. So it is easy to understand then can go to you, both in printed or e-book style are available. We advise you for having this kind of Space Elevators: An Advanced Earth-Space Infrastructure for the New Millennium instantly.

#### **Keri Lo:**

Reading a book to get new life style in this season; every people loves to read a book. When you read a book you can get a great deal of benefit. When you read guides, you can improve your knowledge, since book has a lot of information in it. The information that you will get depend on what forms of book that you have read. If you need to get information about your study, you can read education books, but if you want to entertain yourself read a fiction books, these us novel, comics, along with soon. The Space Elevators: An Advanced Earth-Space Infrastructure for the New Millennium offer you a new experience in studying a book.
