Soil Conservation Service Curve Number (SCS-CN) Methodology (Water Science and Technology Library) S.K. Mishra, Vijay Singh

The Soil Conservation Service (SCS) curve number (CN) method is one of the most popular methods for computing the runoff volume from a rainstorm. It is popular because it is simple, easy to understand and apply, and stable, and accounts for most of the runoff producing watershed characteristics, such as soil type, land use, hydrologic condition, and antecedent moisture condition. The SCS-CN method was originally developed for its use on small agricultural watersheds and has since been extended and applied to rural, forest and urban watersheds. Since the inception of the method, it has been applied to a wide range of environments. In recent years, the method has received much attention in the hydrologic literature. The SCS-CN method was first published in 1956 in Section-4 of the National Engineering Handbook of Soil Conservation Service (now called the Natural Resources Conservation Service), U. S. Department of Agriculture. The publication has since been revised several times. However, the contents of the methodology have been nonetheless more or less the same. Being an agency methodology, the method has not passed through the process of a peer review and is, in general, accepted in the form it exists. Despite several limitations of the method and even questionable credibility at times, it has been in continuous use for the simple reason that it works fairly well at the field level.

From reader reviews:

Jerold Richards:

The feeling that you get from Soil Conservation Service Curve Number (SCS-CN) Methodology (Water Science and Technology Library) is a more deep you looking the information that hide in the words the more you get serious about reading it. It does not mean that this book is hard to be aware of but Soil Conservation Service Curve Number (SCS-CN) Methodology (Water Science and Technology Library) giving you joy feeling of reading. The author conveys their point in particular way that can be understood by means of anyone who read that because the author of this e-book is well-known enough. This book also makes your own vocabulary increase well. So it is easy to understand then can go to you, both in printed or e-book style are available. We suggest you for having this specific Soil Conservation Service Curve Number (SCS-CN) Methodology (Water Science and Technology Library) instantly.

Stephanie Matias:

People live in this new day of lifestyle always try to and must have the time or they will get lot of stress from both day to day life and work. So , if we ask do people have free time, we will say absolutely indeed. People is human not just a robot. Then we request again, what kind of activity are you experiencing when the spare time coming to you actually of course your answer will probably unlimited right. Then ever try this one, reading textbooks. It can be your alternative within spending your spare time, typically the book you have read is actually Soil Conservation Service Curve Number (SCS-CN) Methodology (Water Science and Technology Library).

Leslie Bergeron:

Playing with family within a park, coming to see the marine world or hanging out with good friends is thing that usually you may have done when you have spare time, after that why you don't try issue that really opposite from that. One particular activity that make you not sensation tired but still relaxing, trilling like on roller coaster you are ride on and with addition details. Even you love Soil Conservation Service Curve Number (SCS-CN) Methodology (Water Science and Technology Library), you can enjoy both. It is fine combination right, you still need to miss it? What kind of hang type is it? Oh come on its mind hangout men. What? Still don't understand it, oh come on its named reading friends.

Mable Watkins:

As a university student exactly feel bored to help reading. If their teacher asked them to go to the library or to make summary for some guide, they are complained. Just small students that has reading's heart and soul or real their pastime. They just do what the teacher want, like asked to the library. They go to at this time there but nothing reading significantly. Any students feel that reading through is not important, boring in addition to can't see colorful photographs on there. Yeah, it is to get complicated. Book is very important for yourself. As we know that on this time, many ways to get whatever we wish. Likewise word says, ways to

reach Chinese's country. Therefore , this Soil Conservation Service Curve Number (SCS-CN) Methodology (Water Science and Technology Library) can make you truly feel more interested to read.
